

Development × Technology × Quality

Outstanding development capabilities, technical skills and quality management support our bolting solutions.

Fastening technologies that we have accumulated since our foundation are utilized to produce both torque control devices and bolt fastening tools. We continue to provide innovative products that meet customer needs.

Development capabilities

Developing new potential fields by handling on-site needs.

Our product development is based on the policy of pursuing technical challenges and originality. We use metal materials such as titanium and stainless steel for general tool products, in order to enter the new field in which conventional tools are not used. For torque control devices, we have developed electric torque control wrenches that incorporate the latest electric technologies. We are developing a new potential with a pursuit of both function and design.

Technical skills

Sophisticated & highly expertise

By devoting our resource to achieve more advance technologies and feeding back those technologies to our products. We provide products that satisfy customers in terms of quality, price, and delivery time. We deal with customers' detailed and diverse needs, such as special-order products. We are working on the establishment of an efficient production system and technical skills improvement by developing our own software.

Quality

Meeting international standards and passing a strict inspection

In this age of emphasizing quality, our product quality is to be tested with international standard. Maeda Metal Industries, Ltd. has set a quality policy of "Commit to quality and provide reliable products that satisfy customers." We have established our own strict inspection standards and make use of testing and measurement technologies including torque, strength, durability testing, 3D measurement, universal tester, and hardness measurement. We provide only high performance and quality products to customers for their security.

Showroom in Kawachi-nagano factory

In recent years, TONE has focused on developing many new products and renewing existing products.

Along with that, we have expanded and renewed our showroom inside of the Kawachinagano factory to exhibit more products.

With 4000 products, including new one, we have prepared a TONE brand image room and a wall exhibited with special examples, in order to be able to experience the "Progressive TONE".
